<sup>\*</sup> Card transactions performed in foreign currencies are influenced by several factors, which can cause the amount that will be debited or credited to the cardholder's account to differ from the value obtained by converting the transaction amount using the exchange rate listed on BKT's Official website. These factors include the exchange rate used by the card provider companies Mastercard or Visa, additional fees associated with the services these companies offer, and fluctuations in the exchange rate between the transaction performing date and the transaction clearing date (date when the transaction is settled in the bank's system). The difference of the exchange rate, is calculated to be approximately 2% compared to the exchange rate published in the official website of BKT.
